## **Our Process**

Cellnex has develop robust processes that have resulted in many successful deployments of small cells across different asset owners' portfolios. The processes vary slightly according to the specific technical solution and the type of asset used. It should be noted that much of the activity is invisible to the asset owner as we manage all interfaces with the mobile network operator (MNO), street-works contractors and other parties. The below process outlines the key elements and touchpoints from an asset owner's perspective

This process typically takes 8-12 weeks from demand to installation complete
